

How to pick up non-magnetic screws?

Try with a Suction Head

Available for NATO, MITO and PLUTO Screwdrivers

A [Suction Head](#) is the best way to handle non-magnetic screws (stainless steel, brass, plastic etc.). It can be easily installed on NATO, MITO and PLUTO screwdrivers and a vacuum generator can be supplied separately upon request.

Pair a suction head with an [NFK/RS Screw Feeder](#) to speed up your fastening process and boost productivity!

Different models available

Choose the right suction head for your screwdriver. Each model can be installed on [inline](#) or [CA screwdrivers](#) (for automation).

| Model | Code | Screwdriver Model (and output) |
|---------|--------|--------------------------------|
| ASP HD6 | 010117 | NATO15 (2 mm bit hole) |
| ASP HD7 | 010118 | NATO50 (2 mm bit hole) |
| ASP HD8 | 010119 | MITO15 (3 mm bit hole) |
| ASP HD9 | 010121 | PLUTO3-6-10-15 (3 mm bit hole) |

* A2 and A3 Suction Heads can be supplied upon request.
